

Creating Figures as an Intro to R

Using the **ggplot2** package

Steffi LaZerte

Introductions

Instructor

Dr. Steffi LaZerte

- Background in Biology (Animal Behaviour)
- Working with R since 2007
- Professional R programmer/consultant since 2017

Introductions

Assistant

Dr. Alex Koiter

- Physical Geographer
- Working with R since 2010
- Assistant Professor in Geography and Environment, Brandon University

What about you?

- Name
- Background (Area of study, etc.)
- Familiarity with R (or other programming languages)
 - I've heard of R
 - I've used R
 - I use R all the time

Outline

1. A little about R
2. Creating figures with `ggplot2`
3. Combining figures with `patchwork`
4. Saving figures

Outline

1. A little about R
2. Creating figures with `ggplot2`
3. Combining figures with `patchwork`
4. Saving figures

Taken this or a similar workshop before?

During activities consider...

- Extra activities labeled "Too Easy?"
- Using your own data
- Exploring other aspects of `ggplot2` that interest you

Feel free to ask questions even if it's not the "official" activity!

What is R?

R is Programming language

A programming **language** is a way to give instructions in order to get a computer to do something

- You need to know the language (i.e., the code)
- Computers don't know what you mean, only what you type (unfortunately)
- Spelling, punctuation, and capitalization all matter!

For example

R, what is 56 times 5.8?

```
56 * 5.8
```

```
## [1] 324.8
```

Use code to tell R what to do

R, what is the average of numbers 1, 2, 3, 4?

```
mean(c(1, 2, 3, 4))
```

```
## [1] 2.5
```

Use code to tell R what to do

R, what is the average of numbers 1, 2, 3, 4?

```
mean(c(1, 2, 3, 4))
```

```
## [1] 2.5
```

R, save this value for later

```
steffis_mean <- mean(c(1, 2, 3, 4))
```

Use code to tell R what to do

R, what is the average of numbers 1, 2, 3, 4?

```
mean(c(1, 2, 3, 4))
```

```
## [1] 2.5
```

R, save this value for later

```
steffis_mean <- mean(c(1, 2, 3, 4))
```

R, multiply this value by 6

```
steffis_mean * 6
```

```
## [1] 15
```

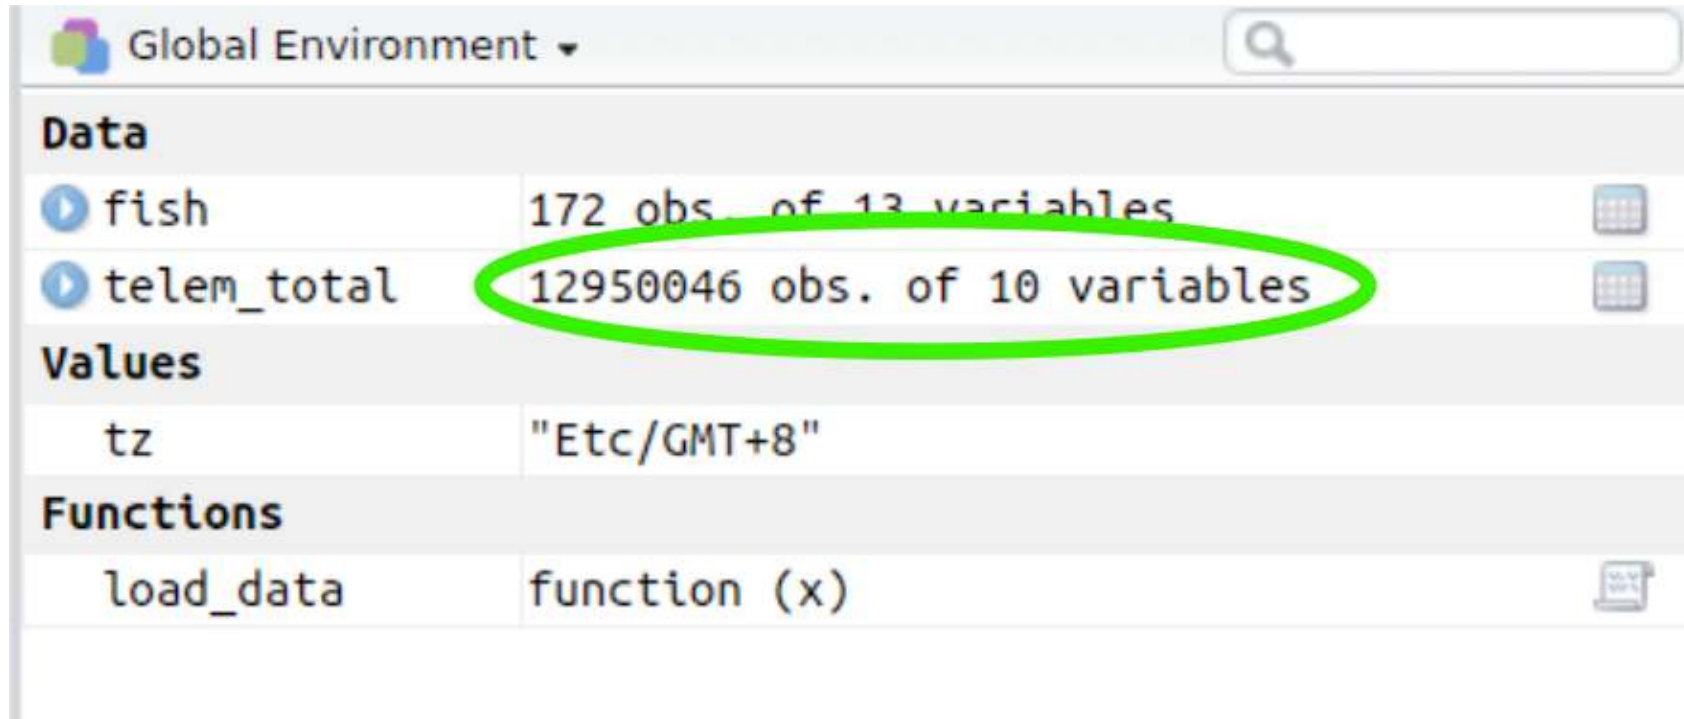

Why R?

R is hard

```
# Get in circle around city
circle <- data.frame()
cutoff <- 10
for(i in unique(gps$region)) {
  n <- nrow(gps[gps$region == i,]) ##number of IDs
  if(i == "wil") tmp <- geocode("Williams Lake, Canada")
  if(i == "kam") tmp <- geocode("Kamloops, Canada")
  if(i == "kel") tmp <- geocode("Kelowna, Canada")
  temp <- data.frame()
  for(a in 1:n){
    if(a <= cutoff) temp <- rbind(temp, gcDestination(lon = tmp$lon,
                                                       lat = tmp$lat,
                                                       bearing = (a*(360/(cutoff))-360/(cutoff)),
                                                       dist = 20,
                                                       dist.units = "km",
                                                       model = "WGS84"))
    if(a > cutoff) temp <- rbind(temp, gcDestination(lon = tmp$lon,
                                                       lat = tmp$lat,
                                                       bearing = ((a-cutoff)*(360/(max(table(gps$region))-10))-360/(max(table(gps$region))-cutoff)),
                                                       dist = 35,
                                                       dist.units = "km",
                                                       model = "WGS84"))
  }
  circle <- rbind(circle, cbind(temp,
                                region = i,
                                hab = gps$hab[gps$region == i],
                                spl = gps$spl.orig[gps$region == i],
```

Why R?

But R is powerful (and reproducible)!

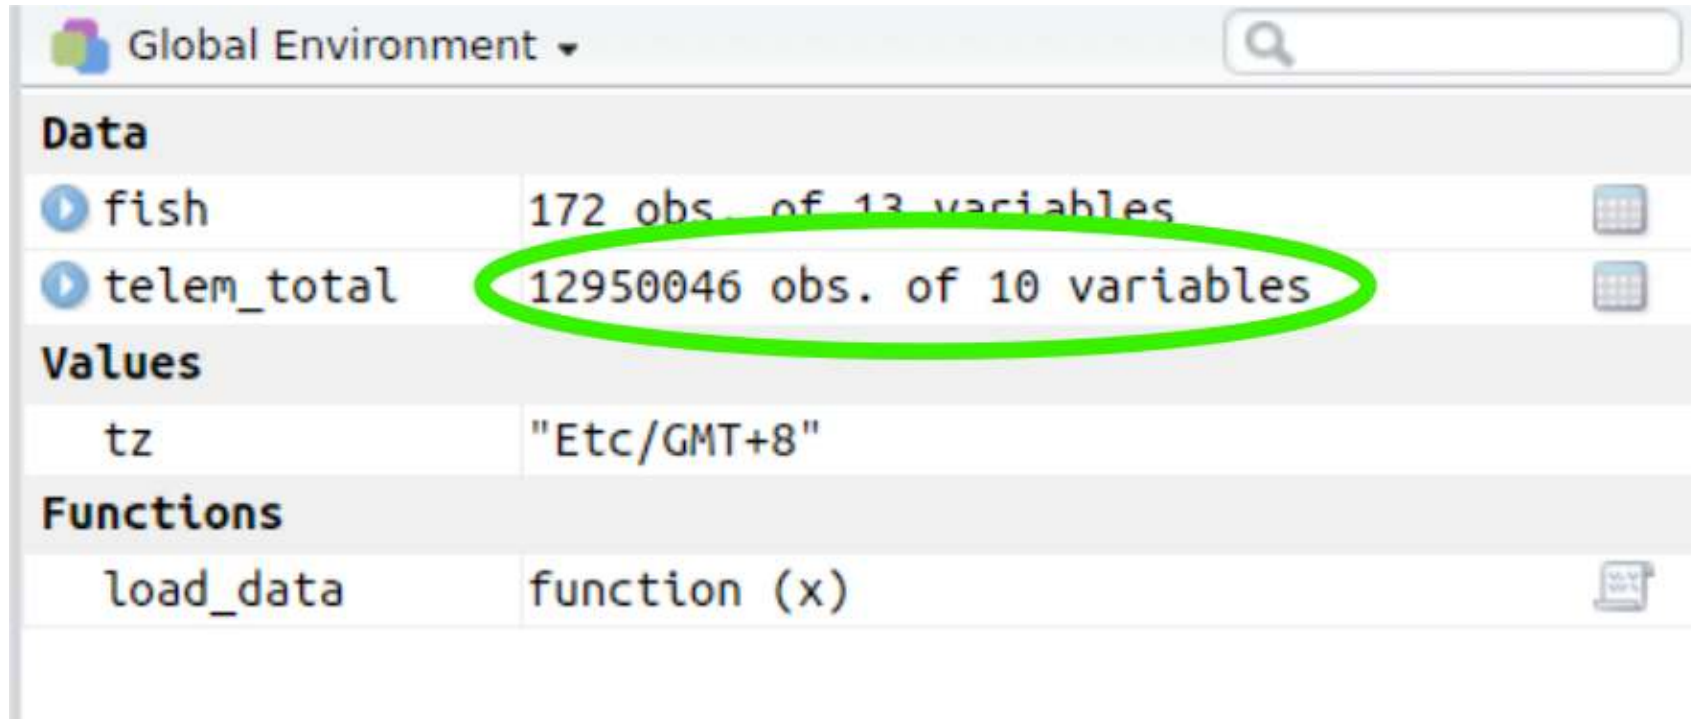

The screenshot shows the 'Global Environment' pane in an R IDE. It is divided into four sections: 'Data', 'Values', 'Functions', and 'load_data'. The 'Data' section contains two entries: 'fish' with 172 observations and 13 variables, and 'telem_total' with 12950046 observations and 10 variables. The 'Values' section contains one entry: 'tz' with the value 'Etc/GMT+8'. The 'Functions' section contains one entry: 'load_data' with the value 'function (x)'. The 'telem_total' entry is circled in green.

| Global Environment | |
|--------------------|-------------------------------|
| Data | |
| fish | 172 obs. of 13 variables |
| telem_total | 12950046 obs. of 10 variables |
| Values | |
| tz | "Etc/GMT+8" |
| Functions | |
| load_data | function (x) |

Why R?

But R is powerful (and reproducible)!

The screenshot shows the 'Global Environment' pane in an R IDE. It lists variables in the 'Data' section: 'fish' (172 obs. of 13 variables) and 'telem_total' (12950046 obs. of 10 variables). The 'telem_total' entry is circled in green. Below the 'Data' section is the 'Values' section, showing 'tz' with the value 'Etc/GMT+8'. At the bottom is the 'Functions' section, showing 'load_data' as a 'function (x)'.

| Global Environment | |
|--------------------|-------------------------------|
| Data | |
| fish | 172 obs. of 13 variables |
| telem_total | 12950046 obs. of 10 variables |
| Values | |
| tz | "Etc/GMT+8" |
| Functions | |
| load_data | function (x) |

Why R?

R is also beautiful

Why R?

R is affordable (i.e., free!)

R is available as Free Software under the terms of the [Free Software Foundation's GNU General Public License](#) in source code form. It compiles and runs on a wide variety of UNIX platforms and similar systems (including FreeBSD and Linux), Windows and MacOS.

Moral of the story?

Make friends, code in groups, learn together and don't beat yourself up

at first I was like...

...but now it's like...

About R

Code, Output, Scripts

Code

- The actual commands

Output

- The result of running code or a script

Script

- A text file full of code that you want to run
- You should always keep your code in a script

Code, Output, Scripts

Code

- The actual commands

Output

- The result of running code or a script

Script

- A text file full of code that you want to run
- You should always keep your code in a script

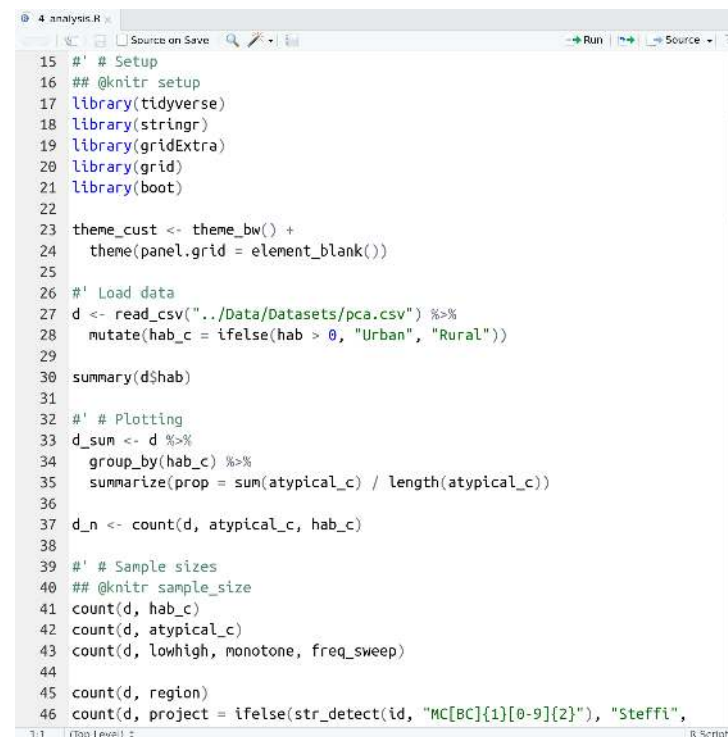

For example:

```
mean(c(1, 2, 3, 4))
```

Code

```
## [1] 2.5
```

Output

```
15 #' # Setup
16 ## @knitr setup
17 library(tidyverse)
18 library(stringr)
19 library(gridExtra)
20 library(grid)
21 library(boot)
22
23 theme_cust <- theme_bw() +
24   theme(panel.grid = element_blank())
25
26 #' Load data
27 d <- read_csv("../Data/Datasets/pca.csv") %>%
28   mutate(hab_c = ifelse(hab > 0, "Urban", "Rural"))
29
30 summary(d$hab)
31
32 #' # Plotting
33 d_sum <- d %>%
34   group_by(hab_c) %>%
35   summarize(prop = sum(atypical_c) / length(atypical_c))
36
37 d_n <- count(d, atypical_c, hab_c)
38
39 #' # Sample sizes
40 ## @knitr sample_size

43 count(d, lowhigh, monotone, freq_sweep)
44
45 count(d, region)
46 count(d, project = ifelse(str_detect(id, "MC[BC]{1}[0-9]{2}"), "Steffi",
```

Script

RStudio vs. R

RStudio

R

- **RStudio** is not **R**
- RStudio is a User Interface or IDE (integrated development environment)
 - (i.e., Makes coding simpler)

functions() - Do things, Return things

mean(), read_csv(), ggplot(), c(), etc.

functions() - Do things, Return things

`mean()`, `read_csv()`, `ggplot()`, `c()`, etc.

- Always have `()`
- Can take **arguments** (think 'options')
 - `mean(x = c(2, 10, 45))`,
 - `mean(x = c(NA, 10, 2, 65), na.rm = TRUE)`

functions() - Do things, Return things

`mean()`, `read_csv()`, `ggplot()`, `c()`, etc.

- Always have `()`
- Can take **arguments** (think 'options')
 - `mean(x = c(2, 10, 45))`,
 - `mean(x = c(NA, 10, 2, 65), na.rm = TRUE)`
- Arguments defined by **name** or by **position**
- With correct position, do not need to specify by name

By name:

```
mean(x = c(1, 5, 10))
```

```
## [1] 5.333333
```

By position:

```
mean(c(1, 5, 10))
```

```
## [1] 5.333333
```

R documentation

?mean

?mean

mean {base}

R Documentation

Arithmetic Mean

Description

Generic function for the (trimmed) arithmetic mean.

Usage

```
mean(x, ...)
```

```
## Default S3 method:
```

```
mean(x, trim = 0, na.rm = FALSE, ...)
```

Arguments

- | | |
|-------|--|
| x | An R object. Currently there are methods for numeric/logical vectors and date , date-time and time interval objects. Complex vectors are allowed for <code>trim = 0</code> , only. |
| trim | the fraction (0 to 0.5) of observations to be trimmed from each end of x before the mean is computed. Values of trim outside that range are taken as the nearest endpoint. |
| na.rm | a logical value indicating whether NA values should be stripped before the computation proceeds. |
| ... | further arguments passed to or from other methods. |

Data

Generally kept in **vectors** or **data.frames**

- These are objects with names (like functions)
- We can use **<-** to assign values to objects (assignment)

Vector (1 dimension)

```
my_data <- c("a", 100, "c")  
my_data
```

```
## [1] "a" "100" "c"
```

Data frame (2 dimensions)

```
my_data <- data.frame(site = c("s1", "s2", "s3"),  
                      count = c(101, 102, 103),  
                      treatment = c("a", "b", "c"))  
  
my_data
```

```
##   site count treatment  
## 1  s1    101         a  
## 2  s2    102         b  
## 3  s3    103         c
```

rows x
columns

Your first *real* code!

First Code

```
# First load the packages
library(palmerpenguins)
library(ggplot2)

# Now create the figure
ggplot(data = penguins, aes(x = body_mass_g, y = bill_length_mm, colour = species)) +
  geom_point()
```

- Copy/paste or type this into the script window in RStudio
 - You may have to go to File > New File > R Script
- Click anywhere on the first line of code
- Use the 'Run' button to run this code, **or** use the short-cut **Ctrl-Enter**
 - Repeat until all the code has run

First Code

```
# First load the packages
library(palmerpenguins)
library(ggplot2)

# Now create the figure
ggplot(data = penguins, aes(x = body_mass_g, y = bill_length_mm, colour = species)) +
  geom_point()
```

```
## Warning: Removed 2 rows containing missing values (geom_point).
```

First Code

```
# First load the packages  
library(palmerpenguins)  
library(ggplot2)
```

Packages
ggplot2 and **palmerpenguins**

```
# Now create the figure  
ggplot(data = penguins, aes(x = body_mass_g, y = bill_length_mm, colour = species)) +  
  geom_point()
```

```
## Warning: Removed 2 rows containing missing values (geom_point).
```

First Code

```
# First load the packages
```

```
library(palmerpenguins)
```

```
library(ggplot2)
```

```
# Now create the figure
```

```
ggplot(data = penguins, aes(x = body_mass_g, y = bill_length_mm, colour = species)) +  
  geom_point()
```

```
## Warning: Removed 2 rows containing missing values (geom_point).
```

Functions:

library(), **ggplot()**
aes(), and **geom_point()**

First Code

```
# First load the packages  
library(palmerpenguins)  
library(ggplot2)
```

```
# Now create the figure
```

```
ggplot(data = penguins, aes(x = body_mass_g, y = bill_length_mm, colour = species)) +  
  geom_point()
```

+
(Specific to **ggplot2**)

```
## Warning: Removed 2 rows containing missing values (geom_point).
```

First Code

```
# First load the packages
library(palmerpenguins)
library(ggplot2)

# Now create the figure
ggplot(data = penguins, aes(x = body_mass_g, y = bill_length_mm, colour = species)) +
  geom_point()
```

```

## # ... with 334 more rows
```

Your turn! Run this code and look at the output in the console

A basic plot

```
library(palmerpenguins)
library(ggplot2)

ggplot(data = penguins, aes(x = body_mass_g, y = bill_length_mm)) +
  geom_point()
```

Break it down

```
library(palmerpenguins)  
library(ggplot2)  
  
ggplot(data = penguins, aes(x = body_mass_g, y = bill_length_mm)) +  
  geom_point()
```

library(palmerpenguins)

- Load the **palmerguins** package so we have access to **penguins** data

Break it down

```
library(palmerpenguins)  
library(ggplot2)  
  
ggplot(data = penguins, aes(x = body_mass_g, y = bill_length_mm)) +  
  geom_point()
```

library(ggplot2)

- Load the **ggplot2** package (which gives us access to the **ggplot()** function among others)

Break it down

```
library(palmerpenguins)
library(ggplot2)

ggplot(data = penguins, aes(x = body_mass_g, y = bill_length_mm)) +
  geom_point()
```

ggplot()

- Set the attributes of your plot
- **data** = Dataset
- **aes** = Aesthetics (how the data are used)
- Think of this as your plot defaults

Break it down

```
library(palmerpenguins)
library(ggplot2)

ggplot(data = penguins, aes(x = body_mass_g, y = bill_length_mm)) +
  geom_point()
```

geom_point()

- Choose a **geom** function to display the data
- Always *added* to a **ggplot()** call with **+**

ggplots are essentially layered objects, starting with a call to **ggplot()**

Plots are layered

```
ggplot(data = penguins, aes(x = sex, y =  
body_mass_g))
```

```
ggplot(data = penguins, aes(x = sex, y =  
body_mass_g)) +  
geom_boxplot()
```

Plots are layered

```
ggplot(data = penguins, aes(x = sex, y =  
body_mass_g))
```

```
ggplot(data = penguins, aes(x = sex, y =  
body_mass_g)) +  
geom_point()
```

Plots are layered

```
ggplot(data = penguins, aes(x = sex, y =  
body_mass_g))
```

```
ggplot(data = penguins, aes(x = sex, y =  
body_mass_g)) +  
geom_violin()
```

Plots are layered

You can add multiple layers

```
ggplot(data = penguins, aes(x = sex, y =  
body_mass_g)) +  
  geom_boxplot()
```

Plots are layered

You can add multiple layers

```
ggplot(data = penguins, aes(x = sex, y =  
body_mass_g)) +  
  geom_boxplot() +  
  geom_point(size = 2, colour = "red")
```

Plots are layered

You can add multiple layers

```
ggplot(data = penguins, aes(x = sex, y =  
body_mass_g)) +  
  geom_boxplot() +  
  geom_point(size = 2, colour = "red")
```

Order matters

```
ggplot(data = penguins, aes(x = sex, y =  
body_mass_g)) +  
  geom_point(size = 2, colour = "red") +  
  geom_boxplot()
```

Plots are objects

Any ggplot can be saved as an object

```
g <- ggplot(data = penguins, aes(x = sex, y = body_mass_g))
```

Plots are objects

Any ggplot can be saved as an object

```
g <- ggplot(data = penguins, aes(x = sex, y = body_mass_g))
```

g

Plots are objects

Any ggplot can be saved as an object

```
g <- ggplot(data = penguins, aes(x = sex, y = body_mass_g))
```

```
g
```

```
g + geom_boxplot()
```

More Geoms

(Plot types)

Geoms: Lines

```
ggplot(data = penguins, aes(x = body_mass_g, y = bill_length_mm)) +  
  geom_line()
```

Geoms: Histogram

```
ggplot(data = penguins, aes(x = body_mass_g)) +  
  geom_histogram(binwidth = 100)
```

Geoms: Histogram

```
ggplot(data = penguins, aes(x = body_mass_g)) +  
  geom_histogram(binwidth = 100)
```

Note: We only need 1
aesthetic here (x)

Geoms: Barplots

Let **ggplot** count your data

```
ggplot(data = penguins, aes(x = sex)) +  
  geom_bar()
```

Geoms: Barplots

You can also provide the counts

```
# Create our own data frame
species <- data.frame(species = c("Adelie", "Chinstrap", "Gentoo"),
                      n = c(152, 68, 124))

ggplot(data = species, aes(x = species, y = n)) +
  geom_bar(stat = "identity")
```

Your Turn: Create this plot

```
library(ggplot2)

ggplot(data =         , aes(x =         , y =         )) +
  geom_      (        )
```

Your Turn: Create this plot

```
library(ggplot2)

ggplot(data = penguins, aes(x = island, y = bill_depth_mm)) +
  geom_boxplot(colour = "blue")
```

Showing data by group

Mapping aesthetics

```
ggplot(data = penguins, aes(x = body_mass_g, y = bill_length_mm)) +  
  geom_point()
```

Mapping aesthetics

```
ggplot(data = penguins, aes(x = body_mass_g, y = bill_length_mm, colour = sex)) +  
  geom_point()
```

Mapping aesthetics

ggplot automatically populates the legends (combining where it can)

```
ggplot(data = penguins, aes(x = body_mass_g, y = bill_length_mm, colour = sex, shape = sex)) +  
  geom_point()
```

Faceting: `facet_wrap()`

```
ggplot(data = penguins, aes(x = body_mass_g, y = bill_length_mm, colour = sex)) +  
  geom_point() +  
  facet_wrap(~ species)
```

Split plots by **one**
grouping variable

Faceting: `facet_grid()`

```
ggplot(data = penguins, aes(x = body_mass_g, y = bill_length_mm, colour = sex)) +  
  geom_point() +  
  facet_grid(sex ~ species)
```

Split plots by **two**
grouping variables

Your Turn: Create this plot

```
ggplot(data =         , aes(                )) +  
     +  
    
```

Hint: **colour** is for outlining with a colour, **fill** is for 'filling' with a colour

Too Easy? Split boxplots by sex **and** island

Your Turn: Create this plot

```
ggplot(data = penguins, aes(x = sex, y = flipper_length_mm, fill = sex)) +  
  geom_boxplot() +  
  facet_wrap(~ species)
```

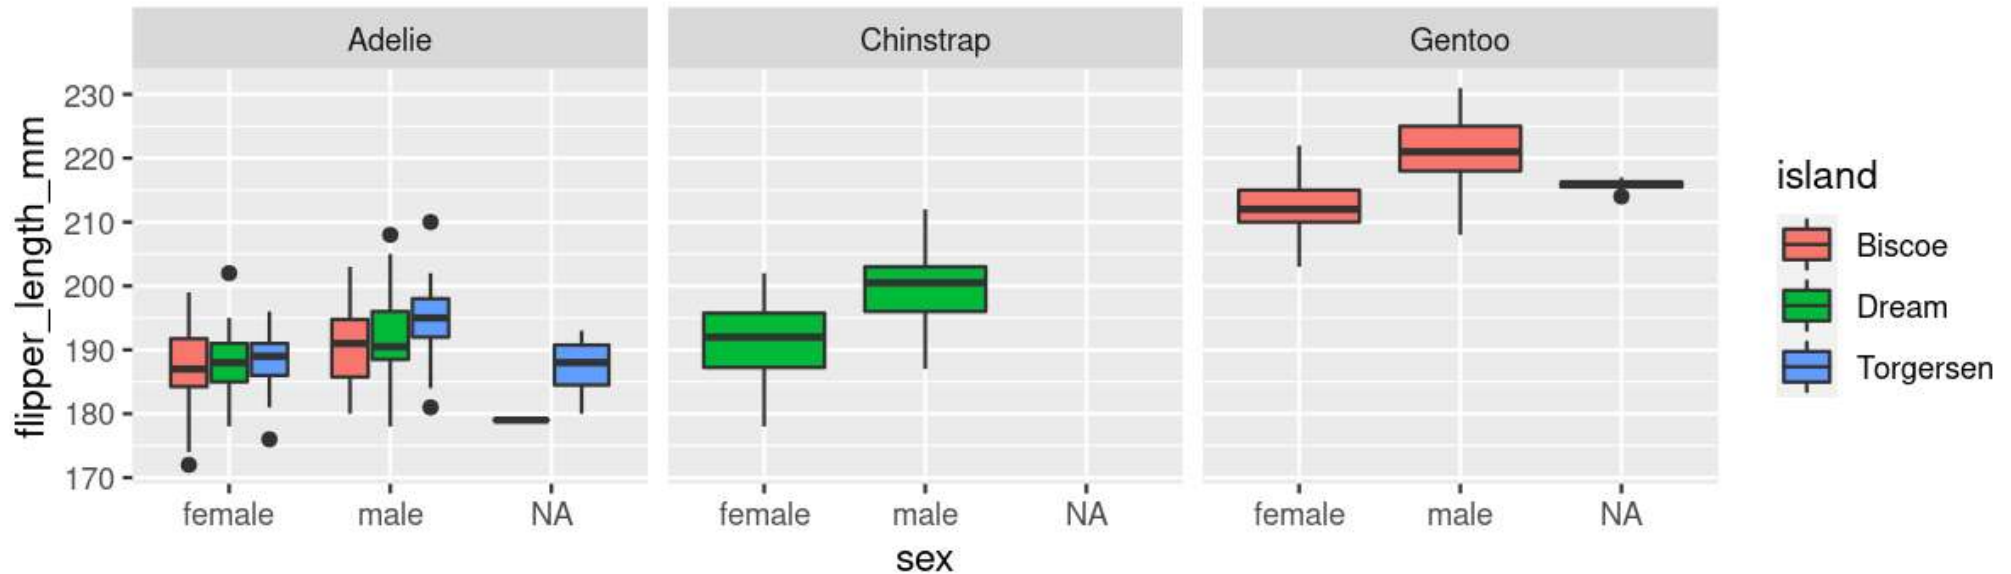

Hint: **colour** is for outlining with a colour, **fill** is for 'filling' with a colour

Too Easy? Split boxplots by sex **and** island

Your Turn: Create this plot

Too Easy?

```
ggplot(data = penguins, aes(x = sex, y = flipper_length_mm, fill = island)) +  
  geom_boxplot() +  
  facet_wrap(~ species)
```

Small change (**fill = sex** to **fill = island**) results in completely different plot

Trendlines / Regression Lines

Trendlines / Regression lines

geom_line() is connect-the-dots, not a trend or linear model

```
ggplot(data = penguins, aes(x = body_mass_g, y = bill_length_mm)) +  
  geom_point() +  
  geom_line()
```

Trendlines / Regression lines

geom_line() is connect-the-dots, not a trend or linear model

```
ggplot(data = penguins, aes(x = body_mass_g, y = bill_length_mm))  
  geom_point() +  
  geom_line()
```

Not what we're
looking for

Trendlines / Regression lines

Let's add a trend line properly

Start with basic plot:

```
g <- ggplot(data = penguins, aes(x = body_mass_g, y = bill_length_mm)) +  
  geom_point()  
g
```

Trendlines / Regression lines

Add the `stat_smooth()`

- `lm` is for "linear model" (i.e. trendline)
- grey ribbon = standard error

```
g + stat_smooth(method = "lm")
```

Trendlines / Regression lines

Add the `stat_smooth()`

- remove the grey ribbon `se = FALSE`

```
g + stat_smooth(method = "lm", se = FALSE)
```

Trendlines / Regression lines

A line for each group

- Specify group (here we use **colour** to specify **species**)

```
g <- ggplot(data = penguins, aes(x = body_mass_g, y = bill_length_mm, colour = species)) +  
  geom_point()
```

g

Trendlines / Regression lines

A line for each group

- `stat_smooth()` automatically uses the same grouping

```
g + stat_smooth(method = "lm", se = FALSE)
```

Trendlines / Regression lines

A line for each group AND overall

```
g +  
  stat_smooth(method = "lm", se = FALSE) +  
  stat_smooth(method = "lm", se = FALSE, colour = "black")
```

Your Turn: Create this plot

- A scatter plot: Flipper Length by Body Mass grouped by Species
- With *a single regression line for the overall trend*

Too Easy? Create a separate plot for each sex as well

Your Turn: Create this plot

- A scatter plot: Flipper Length by Body Mass grouped by Species
- With *a single regression line for the overall trend*

```
ggplot(data = penguins, aes(x = body_mass_g, y = flipper_length_mm, colour = species)) +  
  geom_point() +  
  stat_smooth(se = FALSE, colour = "black", method = "lm")
```

Your Turn: Create this plot

Too Easy?

```
ggplot(data = penguins, aes(x = body_mass_g, y = flipper_length_mm, colour = species)) +  
  geom_point() +  
  stat_smooth(se = FALSE, colour = "black", method = "lm") +  
  facet_wrap(~sex)
```

Customizing plots

Customizing: Starting plot

Let's work with this plot

```
g <- ggplot(data = penguins, aes(x = body_mass_g, y = bill_length_mm, colour = species)) +  
  geom_point()
```

Customizing: Labels

```
g + labs(title = "Bill Length vs. Body Mass",  
         x = "Body Mass (g)",  
         y = "Bill Length (mm)",  
         colour = "Species", tag = "A")
```

Customizing: Labels

```
g + labs(title = "Bill Length vs. Body Mass",  
         x = "Body Mass (g)",  
         y = "Bill Length (mm)",  
         colour = "Species", tag = "A")
```

Practice for later
Add proper labels to some of your
previous plots

A

Customizing: Built-in themes

Customizing: Data range

Limit the data (exclude data)

```
g + xlim(c(4000, 5000))
```

```
## Warning: Removed 228 rows containing missing values (geom_point).
```

Customizing: Axes

scale_ + (x or y) + type (continuous, discrete, date, datetime)

- **scale_x_continuous()**
- **scale_y_discrete()**
- etc.

Common arguments

```
g + scale_x_continuous(breaks = seq(0, 20, 10)) # Tick breaks
g + scale_x_continuous(limits = c(0, 15))      # xlim() is a shortcut for this
g + scale_x_continuous(expand = c(0, 0))      # Space between axis and data
```

Customizing: Axes

Customizing: Aesthetics

Using scales

scale_ + aesthetic (**colour**, **fill**, **size**, etc.) + type (**manual**, **continuous**, **datetime**, etc.)

```
g + scale_colour_manual(name = "Type", values = c("green", "purple", "yellow"))
```

Customizing: Aesthetics

Using scales

Or be very explicit:

```
g + scale_colour_manual(name = "Type",  
  values = c("Adelie" = "green", "Gentoo" = "purple", "Chinstrap" = "yellow"),  
  na.value = "black")
```

Customizing: Aesthetics

For colours, consider colour-blind-friendly scales

```
library(ggthemes)
g + scale_colour_colorblind(name = "Type")
g + scale_colour_viridis_d(name = "Type")
```

Customizing: Aesthetics

Forcing

Remove the association between a variable and an aesthetic

```
ggplot(data = penguins, aes(x = body_mass_g, y = bill_length_mm, colour = sex)) +  
  geom_point(colour = "green", size = 5) +  
  stat_smooth(method = "lm", se = FALSE, colour = "red")
```

Customizing: Legends placement

At the: top, bottom, left, right

```
g + theme(legend.position = "top")
```

Exactly here

```
g + theme(legend.position = c(0.15, 0.7))
```

Combining plots

Combining plots with **patchwork**

Setup

- Load **patchwork**
- Create a couple of different plots

```
library(patchwork)

g1 <- ggplot(data = penguins, aes(x = bill_length_mm, y = bill_depth_mm, colour = species)) +
  geom_point()

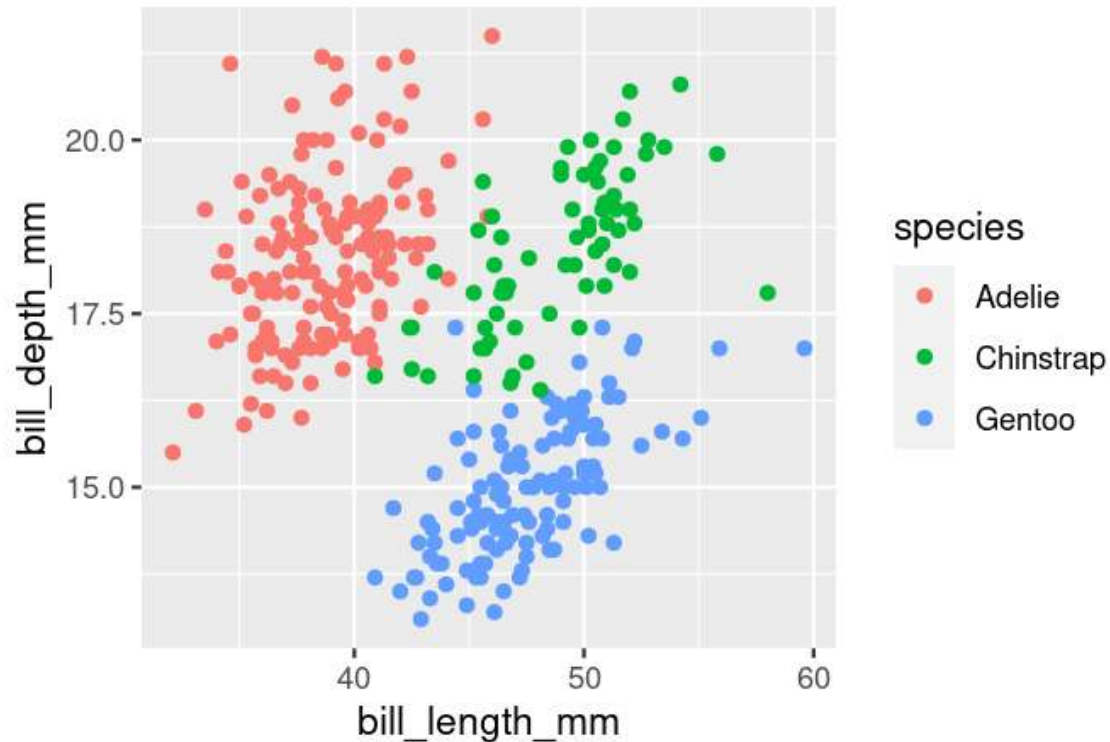

g2 <- ggplot(data = penguins, aes(x = species, y = flipper_length_mm)) +
  geom_boxplot()

g3 <- ggplot(data = penguins, aes(x = flipper_length_mm, y = body_mass_g, colour = species)) +
  geom_point()
```

Combining plots with **patchwork**

Side-by-Side 2 plots

```
g1 + g2
```

Combining plots with **patchwork**

Side-by-Side 3 plots

```
g1 + g2 + g3
```

Combining plots with **patchwork**

Stacked 2 plots

g1 / g2

Combining plots with **patchwork**

More complex arrangements

```
g2 + (g1 / g3)
```

Combining plots with **patchwork**

More complex arrangements

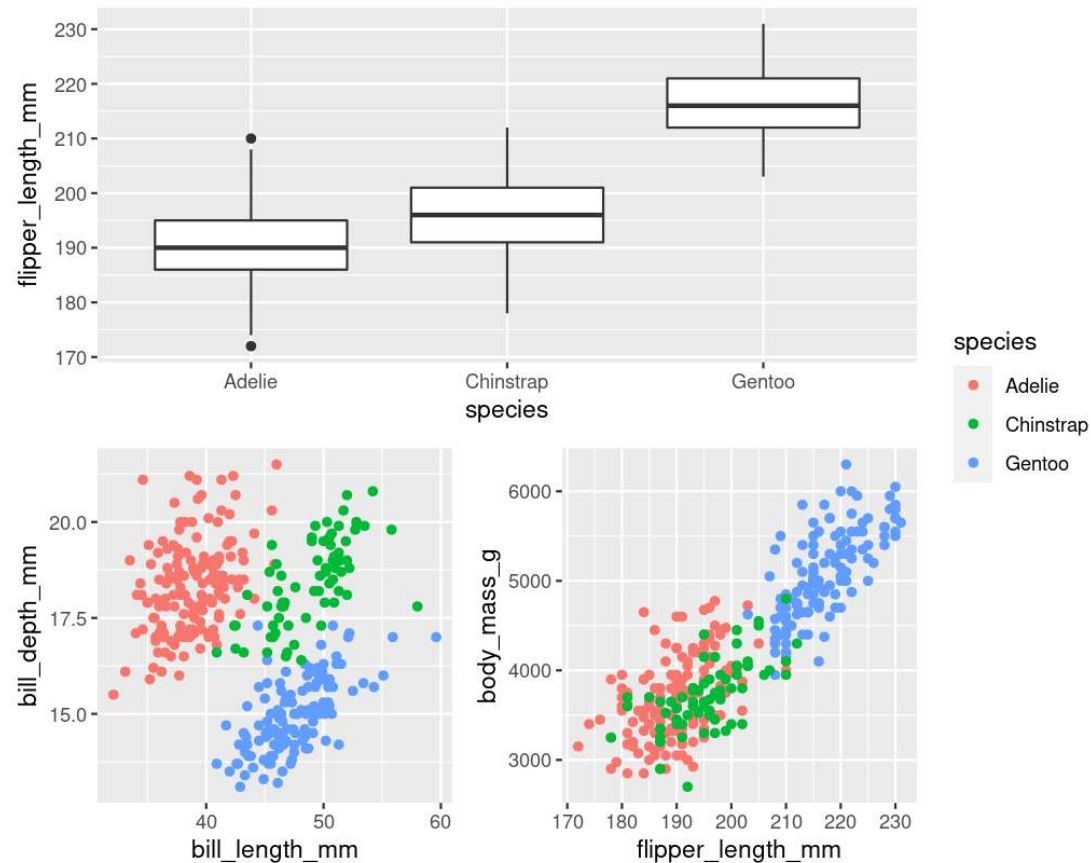

```
g2 / (g1 + g3)
```

Combining plots with **patchwork**

"collect" common legends

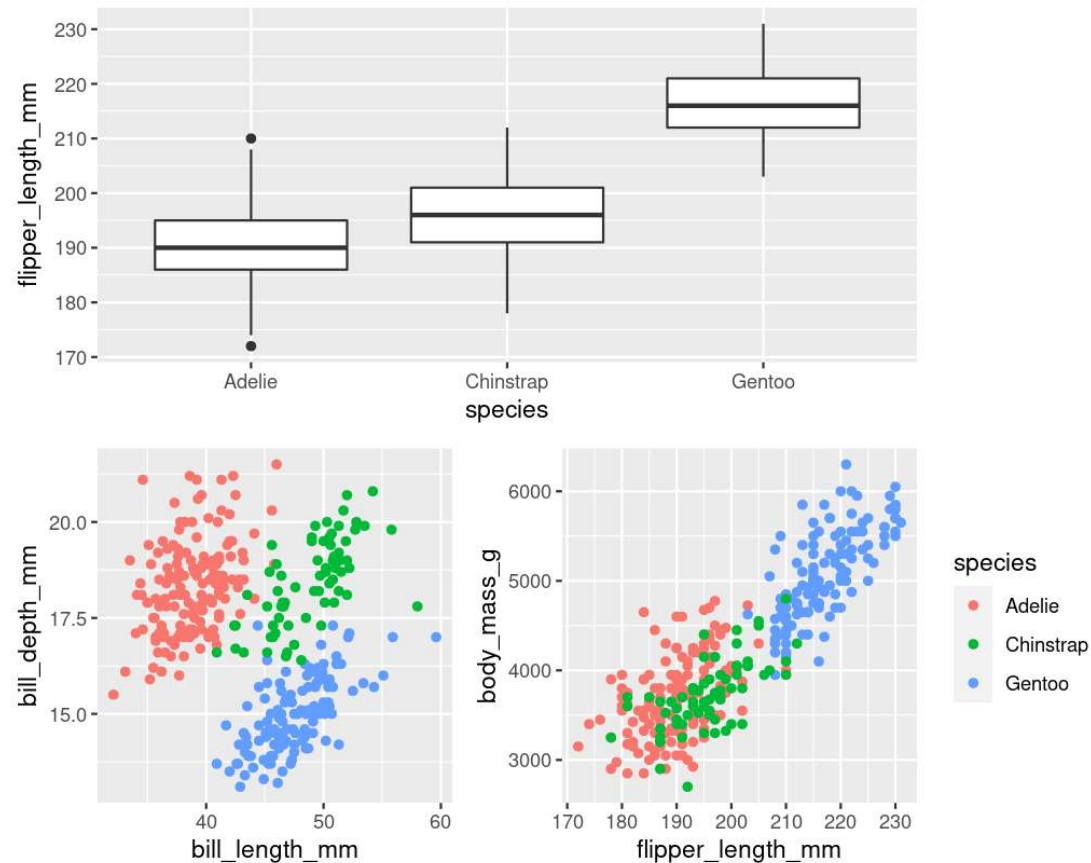

```
g2 / (g1 + g3) + plot_layout(guides = "collect")
```

Combining plots with **patchwork**

"collect" common legends

```
g2 / (g1 + g3 + plot_layout(guides = "collect"))
```

Combining plots with **patchwork**

Annotate

```
g2 / (g1 + g3) +  
  plot_layout(guides = "collect") +  
  plot_annotation(title = "Penguins Data Summary",  
                  caption = "Fig 1. Penguins Data  
Summary",  
                  tag_levels = "A",  
                  tag_suffix = ")")
```

Penguins Data Summary

Demo

ggsave()

```
g <- ggplot(penguins, aes(x = sex, y = bill_length_mm, fill = year)) +  
  geom_boxplot()
```

```
ggsave(filename = "penguins_mass.png", plot = g)
```

```
## Saving 8 x 3.6 in image
```

Saving plots

Publication quality plots

- Many publications require 'lossless' (pdf, svg, eps, ps) or high quality formats (tiff, png)
- Specific sizes corresponding to columns widths
- Minimum resolutions

```
g <- ggplot(penguins, aes(x = sex, y = body_mass_g)) +  
  geom_boxplot() +  
  labs(x = "Sex", y = "Body Mass (g)") +  
  theme(axis.text.x = element_text(angle = 45, hjust = 1))  
  
ggsave(filename = "penguins_mass.pdf", plot = g, dpi = 300,  
        height = 80, width = 129, units = "mm")
```

Wrapping up: Common mistakes

- The **package** is **ggplot2**, the function is just **ggplot()**
- Did you remember to put the **+** at the **end** of the line?
- Order matters! If you're using custom **theme()**'s, make sure you put these lines **after** bundled themes like **theme_bw()**, or they will be overwritten
- Variables like 'year' are treated as continuous, but are really categories
 - Wrap them in **factor()**, i.e. **ggplot(data = penguins, aes(x = factor(year), y = body_mass_g))**

Your Turn!

Create a figure with...

- Custom colour mapping (i.e. `scales_....`)
- Clear, human-readable labels
- More than one graph, each one tagged (e.g., A) or B))
- With more than one geom type
- At least one scatterplot with regression line

:D

OR... Load your own data and create a figure of your own!
